UNIT – 1

2 MARK QUESTIONS

1. Define Software Project Management.
2. List the phases of the Project Management Cycle.
3. Full Form of SPM and COCOMO.
4. List the four elements of the Management Spectrum.
5. Explain the term "Need Identification" in Software Project Management.
6. Differentiate between Vision Document and Scope Document.
7. What are the objectives of Software Project Management?
8. Explain the importance of software project estimation.
9. Describe the role of the decision process in Software Project Management.

5 MARK QUESTIONS

1. What is Software Project Management (SPM)? Explain its importance.
2. Explain the phases of the Project Management Cycle.
3. What are the objectives of Software Project Planning?
4. Explain the need for Software Project Management.
5. Describe the components of the Management Spectrum proposed by Pressman.
6. Explain the structure and components of a Software Project Management Plan (SPMP).
7. Explain different types of project plans used in Software Project Management.
8. Discuss various Software Project Estimation Models.
9. Explain the Decision-Making Process in Software Project Planning.

10 MARK QUESTIONS

1. Define Software Project Management. Explain its importance in the modern software industry.
2. Discuss in detail the objectives of Software Project Management.
3. Explain the Management Spectrum in Software Project Management with a neat diagram.
4. Describe the Project Management Cycle in detail with a suitable diagram.
5. Discuss the importance of Vision and Scope documents in Software Project Management.
6. Explain the structure of a Software Project Management Plan (SPMP).
7. Explain the role and objectives of Software Project Planning.
8. Evaluate different project estimation models and justify which one is most suitable for large-scale projects.
9. Analyze the decision process in Software Project Planning with real-world examples.

UNIT – 2

2 MARK QUESTIONS

1. Define Work Breakdown Structure (WBS).
2. What is an activity in project management?
3. List two objectives of project scheduling.
4. State the difference between project life cycle and product life cycle.
5. Explain the importance of WBS in project planning.
6. What are milestones in a project schedule?
7. Differentiate between functional and matrix organization structures.
8. What are the advantages of using network diagrams in project scheduling?
9. Explain the concept of float (slack) time in project scheduling.

5 MARK QUESTIONS

1. Explain the phases of the Project Life Cycle.
2. Describe the types of Work Breakdown Structure (WBS).
3. Explain the functions of project management.
4. Discuss the objectives of project scheduling.
5. Explain PERT analysis with an example.
6. Discuss the advantages and limitations of network diagrams.
7. Compare the Project Life Cycle and Product Life Cycle.
8. Analyze how scheduling techniques like PERT and CPM help in project control.
9. Explain project crashing and its impact on cost and duration.

10 MARK QUESTIONS

1. Describe the functions, activities, and tasks of project management in detail.
2. Explain Work Breakdown Structure (WBS) with its types and importance.
3. Discuss Project Life Cycle and Product Life Cycle with examples.
4. Explain the objectives of scheduling and the steps in building a project schedule.
5. Construct a Network Diagram for a project and explain how to find the Critical Path.
6. Compare PERT and CPM techniques in project scheduling.
7. Explain the different ways to organize personnel in a project.
8. Analyze how PERT and CPM techniques assist in project monitoring and control.
9. Evaluate the role of project scheduling techniques in reducing project risk and improving performance.

UNIT – 3

2 MARK QUESTIONS

1. What are the main dimensions of Project Monitoring and Control?
2. Define Earned Value Analysis (EVA).
3. What is Cost Variance (CV) in project management?
4. What is the purpose of Software Reviews?
5. Explain Schedule Variance (SV) and its importance.
6. Differentiate between Cost Performance Index (CPI) and Schedule Performance Index (SPI).
7. What is Error Tracking and why is it important?
8. Interpret the meaning of CPI = 0.85 and SPI = 1.10.
9. Explain the role of Code Reviews in Project Monitoring.

5 MARK QUESTIONS

1. Explain the dimensions of Project Monitoring and Control.
2. Describe the purpose and importance of Earned Value Analysis (EVA).
3. What are Earned Value Indicators and why are they used?
4. What are the benefits of Software Reviews in project management?
5. Explain how Cost Variance (CV) and Schedule Variance (SV) are interpreted.
6. Discuss the difference between Cost Performance Index (CPI) and Schedule Performance Index (SPI).
7. Explain the process and purpose of Error Tracking in software projects.
8. Analyze the importance of Earned Value Analysis (EVA) in project control with a practical example.
9. Explain how Code Reviews and Walkthroughs contribute to project monitoring and quality improvement.

10 MARK QUESTIONS

1. Explain in detail the dimensions of Project Monitoring and Control.
2. Describe the concept of Earned Value Analysis (EVA) and its components.
3. Explain various Earned Value Indicators with their significance.
4. Discuss the types of software reviews and their importance in project monitoring.
5. Describe the interpretation of Earned Value Indicators (CV, SV, CPI, SPI) using examples.
6. Explain the process and benefits of Error Tracking in software projects.
7. Compare Cost Performance Index (CPI) and Schedule Performance Index (SPI) in detail.
8. Analyze how Earned Value Analysis (EVA) supports decision-making in project monitoring and control.
9. Evaluate how Software Reviews and Walkthroughs contribute to project quality and control.

UNIT – 4

2 MARK QUESTIONS

1. Define Software Testing.
2. What are the main objectives of testing?
3. List any two principles of software testing.
4. What is a test case?
5. What is the difference between verification and validation in testing?
6. Define Test Environment and explain its role in testing.
7. What is meant by Program Correctness?
8. Explain the purpose of the SEI Capability Maturity Model (CMM).
9. What is Six Sigma, and how does it help in software quality improvement?

5 MARK QUESTIONS

1. Explain the main objectives of software testing.
2. List and explain any four principles of software testing.
3. Describe the structure and purpose of a System Test Plan.
4. Explain the concept of Test Environment and its importance.
5. Explain the different levels of software testing.
6. Describe the structure and purpose of a Test Case.
7. What are the key principles of Total Quality Management (TQM)?
8. Explain the SEI Capability Maturity Model (CMM) and its levels.
9. Describe the concept and significance of Six Sigma in software quality.

10 MARK QUESTIONS

1. Explain in detail the principles of software testing and their significance.
2. Describe the structure and contents of a System Test Plan.
3. Explain the different levels of software testing with examples.
4. Describe Software Quality Metrics and their importance.
5. Discuss the Total Quality Management (TQM) framework and its principles in software engineering.
6. Explain the SEI Capability Maturity Model (CMM) and how it helps improve software quality.
7. Describe the types of testing based on purpose and explain each briefly.
8. Analyze and compare Six Sigma and SPICE in improving software quality.
9. Evaluate how SQA activities ensure overall software quality and reliability.

UNIT – 5

2 MARK QUESTIONS

1. Define Software Configuration Management (SCM).
2. What is a Software Configuration Item (SCI)?
3. Define a Baseline in SCM.
4. What is Version Control?
5. What are the main tasks involved in the SCM process?
6. Define Change Control and explain its purpose.
7. What is Risk Management in software projects?
8. Explain the purpose of a Risk Breakdown Structure (RBS).
9. What are the major steps in the Risk Management Process?

5 MARK QUESTIONS

1. Explain the objectives of Software Configuration Management (SCM).
2. List and explain the major components of SCM.
3. What is a Software Configuration Item (SCI)? Give examples.
4. Explain the concept and importance of Baselines in SCM.
5. Describe the steps in the Software Configuration Management (SCM) process.
6. Explain the Change Control process in detail.
7. Explain the importance of Version Control in SCM.
8. Explain the Risk Management Process in software projects.
9. Explain the purpose and benefits of a Risk Breakdown Structure (RBS).

10 MARK QUESTIONS

1. Explain in detail the objectives and functions of Software Configuration Management (SCM).
2. Describe Software Configuration Items (SCIs) and their importance in SCM.
3. Explain the concept of a baseline in SCM with examples.
4. Describe the role and benefits of Version Control Systems in software projects.
5. Explain the SCM process with suitable diagram and examples.
6. Explain Change Control and its significance in project management.
7. Describe different types of project risks with examples.
8. Explain the Risk Management Process in software projects with examples.
9. Discuss the role of Risk Breakdown Structure (RBS) in managing software project risks.
